

Valuing Children
INITIATIVE

THE VALUING CHILDREN INITIATIVE

Foundation Paper April 2016

THE VALUING CHILDREN INITIATIVE (VCI) IS A JOINT PROJECT FUNDED BY CENTRECARE (Inc.) AND PARKERVILLE CHILDREN AND YOUTH CARE (Inc.) THE VCI COMMENCED IN JANUARY 2016.

THIS PAPER WAS WRITTEN BY THE VCI PROJECT MANAGER LINDA SAVAGE. THE AUTHOR WISHES TO ACKNOWLEDGE THE ASSISTANCE OF PROJECT OFFICER EMMA KING.

* The term “Children” is used throughout this paper to refer to children and young people aged 0 – 18 years.

Additional copies of this paper in electronic or hard copy are available by contacting Centrecare on 08 9325664.

INTRODUCTION

*'A society that is good for children is good for everyone.'*¹

The impetus for the Valuing Children Initiative (VCI) is the desire to ensure that all children in Australia experience the caring, safe and supportive childhood they deserve and have the right to expect. The ambition of the VCI is to inspire Australians to value all children, to understand that a child's wellbeing is the shared responsibility of the entire community and to ensure children are at the forefront of our considerations.

The initiative reflects growing concern that despite the compelling evidence about what a child needs to flourish, this has not always successfully translated into action, resources and better outcomes for children.

A greater societal commitment to all children is necessary to overcome this, and to ensure that children's rights and needs are given the priority they deserve. This requires the commitment, drive and active support of the community, armed with the belief and knowledge that when children flourish, so too does a society.

'When children flourish, so too does a society.'

The Director of Centrecare - Mr Tony Pietropiccolo AM, who was the catalyst for the VCI, has stressed the need for widespread support from not-for-profits, philanthropists, government and all organisations and individuals committed to children to ensure the success of the VCI. Mr Pietropiccolo said, *'While Centrecare and Parkerville Children and Youth Care Incorporated have established the VCI, we are aware that many others have also identified that there are attitudinal barriers that must be addressed to enable us to better protect and nurture all children.'*

The CEO of Parkerville CYC - Mr Basil Hanna, has said the desired outcome of the VCI, *'... is a greater societal awareness of children and their needs, as well as the importance of ensuring that all children are loved, safe and able to maximise on their potential and wellbeing.'*

THE VALUING CHILDREN INITIATIVE

The driving force for the Valuing Children Initiative, (VCI) is the desire to ensure that all children in Australia experience the caring, safe and supportive childhood they deserve and have the right to expect. The last 50 years has seen significant strides in reaching that goal, and in improving outcomes for children, but it has also seen calamitous failures.

It is important to recognise the positives and the capacity for progress. The marked improvements in the rate of survival at birth, in infancy and the decrease in cancer related deaths amongst children is notable. There has also been a significant decline in the number of accidents and deaths in childhood. Life expectancy has significantly improved for most children overall. School attendance and tertiary education opportunities have improved for everyone, and notably girls. Australia is ranked in the top third by the Organisation for Economic Co-operation Development (OECD) for approximately one quarter of indicators for child, youth and health wellbeing. It leads the world in low youth smoking rates, some educational and employment outcomes, and environmental conditions at home.²

The last 50 years has seen significant strides in... improving outcomes for children, but it has also seen calamitous failures.

Despite these achievements however, there remain significant areas of concern for the wellbeing of Australia's children. In 2002, the Australian Research Alliance for Children and Youth, (ARACY) was formed comprising researchers, policy makers and practitioners in response to what it described as the rising trend of problems in children and youth, and the seeming inability to develop effective responses for avoiding or managing them. The latest ARACY Report Card, '*The wellbeing of young Australians*', (the Report Card) was published in March 2013. Based on empirical data from a range of organisations, and input from over 37,000 children and young people about their hopes, needs and desires,³ it reported that:

*'... despite many positive steps being taken, there is evidence to suggest Australian children and youth are not faring as well as they could. In an international context, Australia could best be described as 'middle of the road'.*⁴

Comparative indicators across OECD countries also show that while Australia is doing well in some areas, others, such as child poverty, infant mortality for certain newborns, and youth participation in education and employment are of concern.⁵ The incidence of diabetes,⁶ obesity, mental illness,⁷ sexualisation of children,⁸ and lack of school readiness remains a challenge.⁹ One in four Australian children are overweight or obese.¹⁰ Now for the first time children in affluent countries like Australia are predicted to have a shorter life expectancy than their parents, '...simply because of obesity and the chronic diseases that result from that.'¹¹ In Australia almost one fifth of children live below the poverty line.¹² Indigenous and Torres Strait Islander children continue to bear a far greater burden of our failure to protect children and provide them with a good childhood.¹³

The last two decades have finally begun to reveal the shocking extent of sexual abuse of children in institutions, and in their own homes. The Royal Commission into Institutional Responses to Child Sexual Abuse that commenced proceedings in 2013, is due to report in 2017.¹⁴ The National Children's Commissioner in her 'Children's Rights Report 2015', estimated that 1 in 28 children, first experience sexual abuse by a family member before the age of 15 years.¹⁵ Notifications to child protection services in Australia have increased in the last 3 years, as well as the number of substantiated cases. Of the over 40,000 substantiated cases of neglect, and emotional, physical and sexual abuse, over 5000 were sexual abuse.¹⁶ It is likely these figures are, '...an underestimation of the number of children abused and neglected.'¹⁷

There is no room for complacency.

*'Australia is a wealthy nation that ranks well in comparison with other developed countries on many measures of health and wellbeing. However, evidence indicates that many children and young people face a range of issues including behavioural and emotional problems and mental health issues, living in jobless families, witnessing or experiencing violence in their family, starting school poorly equipped to learn and being homeless.'*¹⁸

WHAT DOES VALUING CHILDREN MEAN?

A child's social and emotional wellbeing comes from feeling safe, cared for and valued. Surveys have confirmed that being valued and loved is, for children and young people, one of the top three aspects of wellbeing.¹⁹ Few would disagree that all children should be valued, but it is far from clear what we mean when we talk about valuing children. 'Value' can be described as the worth we assign to someone, or something. When we value someone we assume it is usually reflected in our attitudes and behaviour, and in our sense of responsibility and investment in their wellbeing and happiness.

'Value' can be describes as the worth we assign to someone, or something.'

One way of thinking about how children are valued, is by examining how our attitudes, actions and sense of responsibility for them have evolved over the last two hundred years. Up until the 19th century children, like married women, were the property of husbands and fathers, and were not even recognised as a separate legal person. Children were to be seen when summoned, heard only when asked to speak and rarely listened to.

Changing attitudes to women coincided with a growing sense of responsibility by the state for the welfare needs of children, in particular their protection from poverty and exploitation. In 1839 for the first time a divorced mother, if deemed to be 'innocent', was permitted to have custody of her children until the age of 7, and access to her older children.²⁰ Laws followed that required the court to have 'regard to the welfare of the child.'²¹ Protection of children from abuse, neglect and exploitation, and the power of courts to make orders as 'parens patriae', (that is to act as the parent for the child that had no other suitable person to act as guardian), reflected the 'increasingly pervasive protective attitude to children', evident by the end of the 19th century.²²

The 20th century saw the recognition of children's rights as distinct from parental rights, or the state's role in the protection of children. The League of Nations adopted the *Geneva Declaration of the Rights of the Child* in 1924.²³ These rights included a child's right to receive the requirements for normal development, the right for a hungry child to be fed, the right of a sick child to receive health care, the right of orphans to shelter and the right of all children to protection from exploitation. This was followed by the *United Nations Universal Declaration of Human Rights* (1948) and in 1959 the *United Nations Declaration of the Rights of the Child* which encapsulated 10 principles for the protection of children's rights, including the universality of rights, the rights to special protection and the right to protection from discrimination among other rights.²⁴ This marked the first major international consensus on the fundamental principles of children's rights, and was notable for the recognition of special rights for children that reflected their inherent vulnerability. In 1989 the *Convention on the Rights of the Child*, the most widely ratified international human rights treaty in history, changed the way children were to be viewed and treated, emphasising their position as human beings with a distinct set of rights, instead of as passive objects.²⁵

The 20th century also saw an increasing focus on children's wellbeing and happiness. Childhood began to be regarded as an important stage of life in its own right. Greater academic interest in children, and subsequent research provided overwhelming evidence that physical, emotional and cognitive development in the womb, and in early childhood had a life-long and critical impact on a person's future wellbeing.²⁶ This period lays the foundations for life. There is now,

*'...unequivocal evidence that early experiences from birth to five years of age determine brain architecture and that, once formed, this provides the foundation for all future learning, behaviour and physical and mental health.'*²⁷

Adverse circumstances, neglect and maltreatment of children has been conclusively shown to be linked to higher levels of violence and anti-social behaviour, mental illness, school and economic underperformance, as well as poor physical health in later life.²⁸ A great deal is also known about what children need to thrive throughout the middle years and teenage years²⁹ and the services that are needed to address challenges they may face.

Today the role of the state in protecting children, and the requirement to act in the best interests of children is accepted and embedded in legislation and policy, notwithstanding significantly different perspectives over the last 100 years as to how this has, and should be translated into practice and policy. The primary role of the family, and support for parents and carers, is recognised as pivotal to a happy and safe childhood. In the 21st century, new models of child protection have endeavoured to achieve a balance between statutory child protection services and family support services,³⁰ underlined by a public health model focusing on prevention of child abuse and neglect, as opposed to services responding only when abuse and neglect has already occurred. Since 2009 there has been a national approach to child protection, the National Framework for Protecting Australia's Children 2009 – 2020. In December 2015, the Third Action Plan (2015 -2018) was launched.³¹

The modelling of the long term economic benefits of investing in children to give them a good start in life, and the support they require whilst growing up, has provided more evidence that enhancing the lives of children and helping them reach their potential, benefits not only individual children, but the whole community.³² Social and wellbeing outcomes are increasingly recognised alongside economic indicators as a measure of a nation's success.³³ Children and young people's wellbeing is critical to that success.³⁴

In the last decade, States and Territories have legislated to establish statutory bodies headed by Commissioners and Guardians for Children and Young People, to provide greater independent protection and advocacy. In Western Australia the inaugural Commissioner for Children and Young People, (the Commissioner) was appointed in 2007. The role of the Commissioner is primarily advocacy for those under the age of 18 years old.³⁵ A National Children's Commissioner was appointed in 2013. Despite some differences in their roles,³⁶ the Commissioners and Guardians Offices are premised upon the principle that the views of children and young people in matters affecting them should be listened to, and taken into account.

Children have an important contribution to make, and are best placed to say what makes for a good childhood.

Heeding what children say is now regarded as essential to inform policy makers and to protect children.³⁷ Children have an important contribution to make,³⁸ and are best placed to say what makes for a good childhood.³⁹ The concept of the child as a citizen from birth, a possessor of rights over and above those rights recognised by society, is challenging the idea of the child as the, '...weak subject, a person with needs rather than rights.'⁴⁰ In the last decade the promotion of child inclusive practice has led to greater emphasis on listening to the needs and wishes of children, and taking them explicitly into account in therapeutic practice.⁴¹

Amongst the many individuals and organisations committed to valuing children, there is widespread agreement about what still needs to be done. This includes translating evidence into policy, action and best practice,⁴² ensuring adequate resources,⁴³ breaking down silos, overcoming fragmentation,⁴⁴ and having better coordination of state and federal responses and responsibilities.⁴⁵

The changes in attitudes to all children over the past 200 years, and the plethora of services, organisations and institutions focused on children's protection and wellbeing today, is without doubt testament to society's ability to adapt its social norms, and the genuine commitment to children in Australia. If responsibility for their protection, and recognition of their rights and wellbeing is accepted as a crude measure, then it is true to say that children today are more valued than ever before.

WHY ATTITUDES TO CHILDREN MATTER

Children are by definition, vulnerable because of their physical size, cognitive development, their often utter dependence on adults, and the authority adults wield. In Australia, children are usually portrayed in the media as either cute and innocent, victims or delinquents,⁴⁶ or in transition to becoming an adult with the focus, '... not on their present but on their future'.⁴⁷ The changes over the last two centuries is evidence that a society's attitudes and expectations are intimately connected to how we understand, regard and treat children and the concept of childhood. Attitudes are similarly reflected in the priority we give to children's needs and rights. The dramatic drop in the rate of infant deaths in Australia in the 20th century,⁴⁸ for example, reflected both public health and scientific advances. It also signalled attitudinal change as infant mortality came to be viewed as a, '... social problem,' and, '... an important indicator of social well-being'.⁴⁹ High rates of infant mortality were no longer tolerated as inevitable, or acceptable. How we value children has been identified as directly impacting on attitudes, behaviours and actions towards children.⁵⁰

Attitudes are reflected in the priority we give to children's needs and rights.

The VCI's simple proposition is that while children today are valued, they are simply not valued enough. The need to move further from platitudes, and make Australia a better place for all children, has been identified by some of the most respected and committed advocates for children in Australia. They have highlighted the need to reconsider the priority we give to children, as well as the need for the entire community to understand its shared responsibility for children.

... while children are valued, they are simply not valued enough.

Professors Fiona Stanley, Sue Richardson and Sue Prior in 2005 in their seminal book, *'Children of the Lucky Country? How Australian society has turned its back on children and why children matter,'* challenged Australia to, *'...put children in the centre of our society, (and)encourage a cultural change in Australian society towards greater equality and opportunity for our children.'*⁵¹

June Oscar AO, lauded for her work in leading the campaign for alcohol restrictions in Fitzroy Crossing, has spoken about the huge population of traumatised children affected by family violence in the Kimberley and pointed to the need for society to more explicitly assume responsibility for all children, because it is, *'... a societal issue, when we are wanting healthy human beings for the future.'*⁵²

Those working at the coal face recognise that in tackling the most basic responsibility to protect children, child protection services alone are *'... unable to provide support to all families in need and reduce the risk of child abuse and neglect. Child protection approaches now*

*recognise that protecting children is everyone’s business and that parents, communities, governments, non-government organisations and businesses all have a role to play.’*⁵³

Given then what we know makes for a good childhood, and the commitment there is to children in Australia, it should be unacceptable that so many children are, ‘... not faring as well as they could.’⁵⁴ What then accounts for the gap between what we know, what we do and the lives that some children have to endure? It is timely then to consider if there are other contributing factors, ‘... embedded in the cultural attitudes and behaviours of the community ... conscious or unconscious,’⁵⁵ about how we value and regard children.

Changing attitudes in Australia in recent decades, have played a significant role in focusing attention and elevating societal expectations about what is acceptable, and should be expected. The rapid pace of change globally, has been mirrored in the striking changes in attitudes to women’s participation in all aspects of public life, diversity in what constitutes a family, protection of the environment and smoking for example. The question that needs to be asked is whether attitudes to children have evolved to keep pace with what we want for children, believe they deserve, and have a right to expect?

This is an uncomfortable question. It should be. It is a question that must be asked if we are to move closer to the goal of ensuring that all children have a caring, safe and supportive childhood. It is a question made even more urgent in the face of the stark knowledge of our failure to protect so many children from abuse.

It is timely to consider if there are other contributing factors, ‘...embedded in the cultural attitudes and behaviours of the community... conscious or unconscious,’ about how we value and regard children.

WHAT DO WE KNOW ABOUT ATTITUDES TO CHILDREN IN AUSTRALIA TODAY?

In 2009, ARACY issued a Communiqué referring to Nordic countries, noting that:

*‘Australia must learn from cultures with a positive attitude to children and young people (and) from public policies that achieve high levels of child wellbeing.’*⁵⁶

... a strong culture if valuing and respecting children has been identified as an important factor contributing to the wellbeing

In countries such as Sweden, a strong culture of valuing and respecting⁵⁷ children has been identified as an important factor contributing to the wellbeing of children.⁵⁸

In New Zealand, *Every Child Counts* launched a ‘1000 days to get it right for every child’ campaign in 2011(the campaign) focused on the first three years of a child’s life, with the aim of encouraging political parties and members of parliament to put children at the centre of their policies.⁵⁹ Marking 500 days from the launch of the campaign in May 2013, progress was described as follows:

‘While it is clear that this parliament has focused on children more than previous parliaments have done, there remain significant challenges for parliamentarians in all parties to ensure that New Zealand has the

*policies and practices and attitudes needed to ensure that every child thrives.’*⁶⁰

Part of the campaign was the commissioning of a study of the Netherlands to assess the effectiveness of public investment in children in New Zealand and to identify whether there are specific policies contributing to the Netherlands high child wellbeing outcomes that may inform New Zealand’s efforts to improve the wellbeing and status of children. It highlighted that an inherent culture of valuing and respecting children played a central role in contributing to their wellbeing.⁶¹ It is notable that Nordic countries were amongst the first to outlaw corporal punishment of children.⁶²

The 'Australian Attitudes to Young People Survey', (the survey) undertaken by ARACY in 2012 asked participants to rank in order of importance, seven pre-defined aspects of wellbeing. 'Being loved and valued' was considered the most important aspect for wellbeing by both child and adult participants. Children in Australia want to be valued and respected,⁶³ but do we know if they are as highly valued and respected as children are in a country such as Sweden?⁶⁴ Have we as a society considered what valuing children means, and does it extend further than just our own children and those children that we have immediate contact with?

What proportion of the society would agree that children and young people, (who make up almost one quarter of the population), should be at the forefront of our considerations?⁶⁵ The Survey undertaken by ARACY in 2012, found nearly three quarters of respondents, believed society shares the responsibility for improving the health and wellbeing of children, but only 39% of adult respondents typically considered the wellbeing of children and young people when making decisions.⁶⁶ Is it assumed then that the views and interests for example of the business sector, or other groups within society such as the aged, should have greater influence than those of children and young people? ⁶⁷ Are our attitudes to children influenced by proximity, or clouded by how we perceive other features of their lives and circumstances?⁶⁸ Do we feel more empathy for some children than others? ⁶⁹ How connected are we, as a society and as individuals, to the plight of children who suffer from poverty, from domestic violence, from abuse? Do children's rights, needs and wishes still hold less weight today, than those of adults and institutions, ⁷⁰ as in the past? Even today, is a child's word less likely to be believed than that of an adult? ⁷¹

WAYS FORWARD

The VCI seeks to inspire Australian's to value all children by building understanding and acceptance that children are precious in and of themselves, and that a child's wellbeing is the shared responsibility of the entire community. It also seeks to ensure that all children are at the forefront of our considerations.

The VCI hopes to play a role in creating a compelling picture of what is possible when we do value all children, and that is better lives for all children, and a better society for everyone.

The VCI is an ambitious project. The hope is to engage with as many individuals and organisations in Australia as possible, in the belief that leadership at multiple levels and across sectors is needed for the success of the initiative.

The purpose of the foundation paper is to provide a rationale for the VCI and a starting point to stimulate discussion.

In 2016 the VCI will:

- 1) Seek funding to undertake a survey about attitudes to children in Australia.
- 2) Consult with stakeholders to seek their feedback, support and input.
- 3) Find opportunities to promote discussion and engage with the community about the VCI.
- 4) Build support for a simple, clear and consistent message that all children should be valued and be at the forefront of our considerations.

The Valuing Children Initiative invites you to join us.

A child's wellbeing needs to be seen as the shared responsibility of the entire community, and children should be at the forefront of our considerations.

59. 'Every Child Counts' established in New Zealand in 2004. In 2011 it launched a campaign to highlight the importance of adequate public and community investment in a child's early years – the first 1000 days of life – by releasing a report that shows poor outcomes for children are costing the nation at least 3 percent of GDP, or \$6bn per annum. In a media release to mark the end of the 500 days, it recorded where progress had been made, and where there had been no progress including continuing high rates of child abuse and neglect, and patchy consideration of the impact of policies on children. Every Child Counts has indicated that they may be re-launching the 1000 days campaign for the next parliamentary term. Document provided to VCI by Lisa Woods, Executive Officer. Every Child Counts. (25 February 2016). www.everychildcounts.org.au

67. Today how we value future generations is being discussed around the world. In 2013 'The Report of the Oxford Martin Commission for Future Generations – Now for the Long Term', chaired by Pascal Lamy, argued that discounting, that is the means used to calculate the future value of something today, too often, '...give(s) less weight to the worth of future generations.' The report argues that this amounts to discrimination against future generations, and it is because they do not currently have political or economic influence. (Part C Revalue the Future. Discounting p.61).
